W.L.A.C. STUDENT LEARNING OUTCOMES (SLOs)
A, B, C AND J ARE THE PRIMARY SLOs

The course will address the learning outcomes of the students through the following pathways (with specific assessment tasks shown in bold italics):

A. CRITICAL THINKING: The analysis of problems by differentiating fact from opinions, using evidence and logic to reach conclusions and their consequences. Students will be given a schedule of problems and exercises requiring the selection of appropriate material and the discarding of inappropriate material for each problem at hand.

B. COMMUNICATION: The understanding of the process and promotion of the understanding of information from the issuer to the receiver. The students will study and create examples of general business, general financial, and specific accounting reports to observe and experience the conveying of information. The students will be expected to comment on their understanding of the effectiveness of such reports. The class presentation projects are especially designed to assist with this learning outcome.

C. QUANTITATIVE REASONING: The reasoning, analysis of problems, and synthesis of solutions that are quantitative in nature. The students will be given extensive assignments that will require the use of quantitative analyses and solutions, especially emphasizing the concepts of the equation and managerial application.

D. SELF-AWARENESS THROUGH INTERPERSONAL INTERACTION: The application of self-assessment to the macro environmental societal setting of education, community, career, location, government and other influencing attributes. The students will be exposed to and expected to comment on various case examples of the individual meeting the opportunistic and challenging situations found in education, the community, career paths, government regulation and other attributes.

E. CIVIC RESPONSIBILITY: The application of the principle of sharing the environmental societal setting for maximizing benefits to all concerned. The student will be assigned problems that may have different answers depending upon the target impact on society, and the student will be asked to comment on the quality of the impact.
F. TECHNICAL COMPETENCE: The utilization of the appropriate technology available for situational needs. The classroom will use available college technology to expose the students to currently available technology. The students will study various available technologies. In addition, the students will be asked to comment in class participation on these, other available and envisioned technologies.

G. CULTURAL DIVERSITY: The respectful engagement comparative and contrasting cultures in an effort to understand them and successfully benefit and survive. The students will be exposed to cultural differences through classroom participation and the likely resulting differing attitudes to business practices (especially international business practices).

H. ETHICS AND MORALITY: The process of selecting just moral standards and the practice of high personal integrity through honesty and fairness in personal, professional and college endeavors. The students will be required to read and comment on the ethical presentations offered by the textbook, and to comment on ethical issues arising from classroom participation and the classroom presentations.

I. AESTHETICS: The use of multiple modes of inquiry and approaches to engage with the arts and nature to establish continually a higher level of peace and comfort. The students will engage in discussions regarding the role of accountancy in business and society in promoting the acquisition and delivering of resources to provide for an engagement with the arts, nature, peace and comfort.

J. MATHEMATICAL AND FINANCIAL OPERATIONS-CALCULATIONS: The use of formulas and mathematical tools to calculate and solve quantitative problems related to financial and accounting operations of a business workplace.
