WEST LEADS THE WAY WITH UNPRECEDENTED CLIMATE CHANGE PROGRAM

As headlines, legislators and activists continue to debate and sound the alarm over global warming and extreme weather, West Los Angeles College has launched a Climate Change and Environmental Studies Associate Degree program.

While other institutions offer programs that center on the environment, West's new program aims to specifically study climate change – making predictions based on comparing and contrasting the long-term averages of conditions for a region including temperature records, precipitation records, fire hazards, drought susceptibility, species range shifts and more.

The program will provide a broad background in the science of climate change, but also has components in disciplines such as humanities and social sciences. With the evolving global changes has come an increased demand for environmental and climate control jobs including researchers, technicians, sustainability coordinators, policy lobbyist, science writers and more.

Core classes for this new degree are Global Climate Change and Environmental Ethics. Students can then work with Prof. Jennifer Cole and/or an academic counselor to a science, humanities or business path to achieve the degree.
