

Course Descriptions

BUS 285 Directed Study - Business (2) CSU

This course allows students to pursue directed study in Business Administration on a contract basis under the direction of a supervising instructor.

BUS 385 Directed Study - Business (3) CSU

This course allows students to pursue directed study in Business Administration on a contract basis under the direction of a supervising instructor.

CHEMISTRY

(CHEM)

CHEM 051 Fundamentals of Chemistry I (5) UC/CSU

Recommended: One year of high school algebra, or MATH 115.

This course is a descriptive course in inorganic and organic chemistry. Topics include the metric system of measurement; chemical symbols, formulas and nomenclature systems; chemical equations; physical properties including density, solubility and states of matter; chemical properties; acids, bases, buffers and pH; basic principles of equilibrium and an introduction to radioactivity. Organic topics focus on functional group identification including hydrocarbons, organic halides, alcohols, ketones, acids, esters, amines, carbohydrates, lipids and proteins. This course is designed for Nursing and other Allied Health majors, students in environmentally hazardous materials, elementary education or liberal arts who do not intend to take CHEM 101.

UC Transfer Credit Limit: A maximum of one course from CHEM 051 or 060. No credit for CHEM 051 or 060 if taken after CHEM 101.

CHEM 056 Chemistry for Non-chemistry Majors (4) CSU

This course presents inorganic and biochemical chemistry for non-science majors; students learn about basic chemical principles and how they relate to current environmental issues that shape society, both globally and locally. As they gain a scientific understanding of some challenges that face humanity, such as climate change, our growing energy demands, and future health needs, students analyze how problems and solutions are impacted by human activity. Students perform experiments where they learn common laboratory techniques, including safe handling of chemicals and proper use of laboratory equipment to gain hands-on experience with how humans affect the chemistry of the Earth's natural systems.

CHEM 060 Introduction to General Chemistry (5) UC/CSU (Formerly CHEM 010)

Prerequisites: One year of high school algebra or Math 115 or equivalent.

This course presents the elementary principles of general chemistry, including nomenclature, stoichiometry, chemical compositions, problem solving etc. It is designed to prepare students whose previous chemistry background is inadequate to take CHEM 101. This course is also recommended to

students who have taken high school chemistry more than two years ago. UC Transfer Credit Limit: A student can transfer only CHEM 051 or CHEM 060. No credit is given for CHEM 051 and 060 if taken after CHEM 101.

CHEM 066 Organic and Biochemistry for Allied Health (5) UC/CSU

This course covers the organic and biochemical principles found in physiology and metabolic processes. Topics include organic and biochemistry with emphasis on the role of chemistry in health and disease, as well as molecular diseases and metabolic abnormalities.

CHEM 101 General Chemistry I (5) UC/CSU

(Formerly CHEM 001)

Prerequisites: (1) High school chemistry or CHEM 060 with a grade of "C" or better; (2) A minimum of two years of high school mathematics or MATH 125 or equivalent.

This is a basic course emphasizing principles and theories. It includes discussions of chemical stoichiometry, atomic and molecular structure and the periodic table, gases, liquids, solids, solutions, oxidation reduction, acids and bases, and an introduction to chemical thermodynamics. The laboratory emphasizes basic laboratory skills, chemical principles, and quantitative relationships. UC Transfer Credit Limit: No credit for CHEM 051 or 060 if taken after CHEM 101.

CHEM 102 General Chemistry II (5) UC/CSU

(Formerly CHEM 002)

Prerequisite: CHEM 101 with a grade of "C" or better.

This course is a continuation of CHEM 101, with an introduction to chemical kinetics, chemical equilibrium with emphasis on aqueous equilibria, electrochemistry, nuclear chemistry, organic chemistry, and descriptive inorganic chemistry. The laboratory includes both quantitative experiments and qualitative analysis. Note: No UC credit for CHEM 051 or 060 if taken after CHEM 101.

CHEM 185 Directed Study – Chemistry (1) CSU

This course allows students to pursue directed study in selective chemistry topics under the contractual obligation of being independent scholars. Students perform both literature and laboratory research.

CHEM 211 Organic Chemistry for Science Majors I (5) UC/CSU

(Formerly CHEM 014)

Prerequisite: CHEM 102 with a grade of "C" or better.

Students learn about bonding, molecular structure, stereochemistry and nomenclature of organic compounds, the chemistry of functional groups with emphasis on reactions and reaction mechanisms. In the laboratory, students learn the essential skills of synthesis, purification, extraction, and identification of organic compounds, as well as the use and application of state-of-the-art analytical instruments such as GC, FT-IR, NMR, etc. Chemistry 211 is required as one of the premed, pre dental, pre pharmacy etc. courses.

CHEM 212 Organic Chemistry for Science Majors II (5) UC/CSU

(Formerly CHEM 018)

Prerequisite: CHEM 211.

CHEM 212 is a continuation of CHEM 211 with additional emphasis on the remaining functional groups as well as on multi-step Chemistry 212 is a continuation of Chemistry 211 with additional emphasis on the remaining functional groups as well as on multi-step synthesis, reaction mechanisms, stereo chemistry and modern instrumental and analytical methods. Special attention is given to the molecular structures and reactions of organic compounds with biological importance. Significant laboratory time is devoted to synthesis and analysis of complex organic compounds.

CHEM 221 Biochemistry for Science Majors II (5) UC/CSU

Prerequisite: CHEM 211 with a grade of "C" or better.

This course will provide a detailed introduction to the principles, concepts and terminology of biochemistry, with an emphasis on the structure and function of biological molecules, the role of metabolism in energy production and common biochemical laboratory techniques. Topics include the fundamental structures, chemistry, and properties of four groups of biological macromolecules (carbohydrates, lipids, proteins and nucleic acids) and their building blocks. This course will also present protein structure and function, enzyme catalysis, and the details of the central metabolic pathways (glycolysis, glycogenesis, the citric acid cycle, electron transport, and oxidative phosphorylation) including their regulation and integration. Throughout the course the organizing principles of biochemistry and the distinctive characteristics of the living state will be emphasized. The laboratory exposes the students to a variety of biochemical techniques and how they are used to evaluate biomolecules and systems. These techniques include electrophoresis, spectroscopic analysis, spectrophotometry, fractional distillation, various types of chromatography including paper, thin layer, and molecular exclusion and enzyme assays. This course prepares students for careers in physical and biological sciences, pharmacy, medical and dental professions, veterinary and agricultural sciences, nutrition and food chemistry, and related fields.

CHEM 285 Directed Study –Chemistry (2) CSU

This course allows students to pursue directed study in chemistry on a contract basis under the direction of a supervising instructor.

CHICANO STUDIES

(CHICANO)

CHICANO 002 The Mexican-American in Contemporary Society (3)

The course introduces the student to the major characteristics of the largest growing ethnic group in the United States. Special attention is given to the social, cultural, literary,

artistic, economic, and political elements which differentiate Mexican-Americans in relationship to other groups in American society.

CHICANO 037 Chicano Literature (3)

This course is an introductory analysis of the literary, social, and cultural aspects of the novel, short story, essay, poetry, and drama written by Mexican-Americans. The course reveals the progression of a people and culture in American society, artistically expressed by Mexican-American writers who seek to understand themselves and the world around them.

CHICANO 047 The Mexican-American Woman in Society (3)

This course provides students with a basic understanding of the Chicana in contemporary society. Emphasis is placed on establishing an interdisciplinary framework from which to analyze the experiences and treatment of Mexican-American women in modern society. An analysis of selected Latina issues currently affecting Chicana women is included.

CHILD DEVELOPMENT

(CH DEV)

CH DEV 001 Child Growth and Development (3) UC/CSU

Note: This course is a prerequisite for CH DEV 007, 008, 022, and 023. Required for Teaching Permit.

This course examines the major developmental milestones for children, both typical and atypical, from conception through adolescence in the areas of physical, psychosocial, and cognitive. The course will emphasize interactions between maturational process and environmental factors. While studying developmental theory and investigating research methodologies, students will observe children, evaluate individual differences, and analyze characteristics of development at various stages.

CH DEV 002 Early Childhood: Principles and Practices (3) CSU

Requirement: Verification of an annual tuberculosis test. Required for Teaching Permit. Includes fingerprint clearance through the California Department of Justice (DOJ)

This course provides a demonstration of developmentally appropriate early childhood teaching competencies under guided supervision. Students will utilize practical classroom experiences to make connections between theory and practice, develop professional behaviors, and build a comprehensive understanding of children and families. Child-centered, play-oriented approaches to teaching, learning, and assessment; and knowledge of curriculum content areas will be emphasized as student teachers design, implement and evaluate experiences that promote positive development and learning for all young children.

Course Descriptions

CH DEV 007 Introduction to Curriculum in Early Childhood Education (3) CSU

Prerequisite: CH DEV 001 and 002. Required for Teaching Permit.

Students learn and develop the knowledge and skills to provide appropriate curriculum and environments for young children from birth to age 8. Students examine a teacher's role in supporting development and fostering the joy of learning for all young children using observation and assessment strategies emphasizing the essential role of play. Planning, implementation and evaluation of curriculum includes but not be limited to: language and literacy, social and emotional learning, sensory learning, art and creativity, math, natural and physical sciences. *(This course was formerly CH DEV 004.)*

CH DEV 008 Curriculum in Early Childhood Education (3) CSU

Prerequisite: CH DEV 001 and 002. Required for Teaching Permit.

Students design and evaluate developmentally appropriate curriculum and environments for young children from birth to age 8. Based on the value of play, students demonstrate the teacher's role in applying theory to practice in supporting children's concept development. Preparing and assessing the implementation of curriculum will include but not be limited to: language and literacy, social studies, art and creativity, music and rhythm, perceptual motor development, mathematics, natural and physical sciences. *(This course was formerly CH DEV 004.)*

CH DEV 010 Health, Safety, and Nutrition (3) CSU

This course is an introduction to the laws, regulations, standards, policies and procedures and early childhood curriculum related to child health safety and nutrition. The key components that ensure physical health, mental health and safety for both children and staff will be identified along with the importance of collaboration with families and health professionals. Focus on integrating the concepts into everyday planning and program development for all children. Information dealing with children with special needs and cultural values and traditions that affect and support the well-being of children birth to adolescence is explored.

CH DEV 011 Child, Family, and Community (3) CSU

Recommended: CH DEV 001 and 002.

This course is an examination of the developing child in a societal context focusing on the interrelationship of family, school and community and emphasizes historical and socio-cultural factors. The processes of socialization and identity development will be relationships that support and empower families. Emphasis is placed on familiarizing students with techniques used in parent-teacher conferences and to perceive parents as partners in their child's educational experience.

CH DEV 022 Practicum in Child Development I (4) CSU

Prerequisites: CH DEV 001, 002, 007, 011, and 034 with a grade of "C" or better. TB test clearance is required.

Corequisite: CH DEV 042.

This course is a supervised practicum experience in an approved Early Childhood educational program, such as a preschool, child development center, elementary school, special education center or other early care/early intervention natural environments. Practicum students will be expected to demonstrate developmentally appropriate early childhood teaching competencies under guided supervision. Students utilize practical classroom experiences to make connections between theory and practice, develop professional behaviors, and build a comprehensive understanding of children and families. Child-centered, play-oriented approaches to teaching, learning, assessment and knowledge of curriculum content areas is emphasized as student teachers design, implement and evaluate experiences that promote positive development and learning. An overview of content areas will include but not be limited to: language and literacy, social and emotional learning, sensory learning, art, crafts music, movement, dramatic play, small and large motor, as well as group time. Students will design and implement lesson plans under the supervision of a college instructor and a Master teacher at their Practicum site.

CH DEV 023 Practicum in Child Development II (4) CSU

Prerequisite: Child Development 022.

Corequisite: Child Development 065.

A tuberculosis test and fingerprinting are required.

This course is a demonstration of developmentally appropriate early childhood teaching competencies under guided supervision in a preschool, child development center, elementary school, special education center, or other early care/early intervention natural environments and educational setting. Students will utilize practical classroom experiences to make connections between theory and practice, develop professional behaviors, and build a comprehensive understanding of children and families. Child centered, play-oriented approaches to teaching, learning, and assessment; and knowledge of curriculum content areas will be emphasized as student teachers design, implement and evaluate experiences that promote positive development and learning for children. Students will choose an area of specialization from the following areas: all-inclusive preschool program, infants and toddlers, special needs or school age programs to do their internship during this specialization practicum course.

CH DEV 030 Infant and Toddler Studies I (3) CSU

Prerequisite: CH DEV 001.

This course provides an in-depth study of cognitive/language, social/ emotional and perceptual/motor development domains and milestones of infants from birth to 36 months, as well as, an overview of major theories including attachment, brain development. The value of play, early intervention and relationship-based care in the context of family systems: culture, home language, and traditions. Students will be introduced to the laws and regulations of safe healthy

environments and the rights of all infants and toddlers including children at-risk for disabilities. Class instruction includes objective observations of infants and toddlers in diverse settings.

CH DEV 031 Infant and Toddler Studies II (3) CSU

Prerequisite: CH DEV 001. Advisory: CH DEV 030.

This course implements the principles of inclusive, respectful caregiving for infants and toddlers within a variety of program designs, routines and schedules. Topics cover typical and atypical development, principles of early intervention, preschool transition services, design, implantation and assessment of developmentally appropriate curriculum and environment; health and safety and licensing issues. Coursework includes documentation of learning through observation, guidance toward self-regulation, family communications and community resources. Current research related to benefits of early intervention services and treatments will be addressed.

CH DEV 034 Observing and Recording Children's Behavior (3) CSU

This course includes observing, recording and interpreting children's behavior in a variety of settings. Dairies, anecdotes and other forms of written and oral records are explored and used. This course includes observing children from the ages of 1 month through school aged children. The student will be expected to become familiar with tools such as: Desired Results and DLM for purposes of assessing the growth and development of children. The students will also become familiar with the Environmental Rating Scale for: infants and Toddlers, Early Childhood and School Aged children. This course will provide the student with information dealing with full inclusion and children with special needs as well.

CH DEV 038 Administration and Supervision of Early Childhood Programs I (3) CSU

Recommended: CH DEV 001, 002 and 011.

This course examines and defines the principles and practices of Early Childhood programs organizational structure and administrative responsibilities. It will provide students with the opportunity to study and design budgets, personnel policies, record keeping, reporting techniques and utilizing community resources in preparation for administering and either starting a program or understanding how to operate an established program. The course will expose students to licensing requirements (Title 5 and Title 22), Early Childhood Environment Rating Scale, Program Administration Scale, Desired Results, NAEYC Developmentally Appropriate Practices, the Pre-K Guidelines and N.A.E.Y.C. Code of Ethics.

CH DEV 039 Administration and Supervision of Early Childhood Programs II (3) CSU

Recommended: CH DEV 038.

This course is designed to reinforce the concepts that were studied in CH DEV 038 and to give the student an opportunity to implement the knowledge that they acquired. The course builds on the materials that the student studied and expands

into more detail and complexity the responsibility of administering an Early Childhood program. The course will provide information that will assist them in designing a proposal for operating an experimental program. Every area that is involved in operating a program will be included in the content of the course. The course will require the student to write a grant proposal with all the elements involved in developing a Child Care facility.

CH DEV 042 Teaching in a Diverse Society (3) CSU

Corequisite: CH DEV 022.

This course presents the philosophy and methods related to working with young children and families within a diverse society, including race, language, culture, gender, age social class and children with special needs. Curriculum development and environmental designs will be studied from an inclusive perspective. This course takes an in depth and retrospective approach in processing the student to a position where they have the skills and knowledge necessary to infuse multicultural activities and literature as well as anti-bias perspective into the fabric of the curriculum, teaching modalities, and materials in an Early Childhood educational program.

CH DEV 044 Early Intervention for Children with Special Needs (3) CSU

This course focuses on accommodating and adapting the physical environment, instructional strategies and curriculum to meet the needs of differently-abled children and their families. Legal mandates and the impact of laws and legislation will be examined in respect to the impact on children and their families. Understanding the process of assessment and developing an Individual Family Service Plan will be analyzed and discussed. This course covers the theoretical aspects of working with children with special needs. This course will focus on children ages 0-8 to encompass school age children as well infants through pre-school age children.

CH DEV 045 Programs for Children with Special Needs II (3) CSU

Overview of programs providing special education services for children with special needs focusing on preschool through school age. It will include a study of various early/care early intervention natural environments and educational settings, legislation, characteristics of various exceptionalities and educational implications. Observation in schools will be required. This course identifies the political and social implications that affect special education, and it identifies the different categories of disabilities. The Individual Education Plan is discussed and evaluated. Students are exposed to techniques for identifying and implementing goals and objectives for children with special needs. Teaching techniques and curriculum activities are discussed, designed and implemented in the class projects. The course focuses on children ages infancy through ages 8 to encompass school age children as well.

Course Descriptions

CH DEV 046 School Age Programs I (3) CSU

The student will be introduced to school-age programs. It is designed for those planning to work in before and after school childcare. Topics to be covered will include growth and development, creative experiences, and developmentally appropriate practices and environments. Techniques for guiding children's behavior and communication will be discussed. Appropriate administration and staffing for school age programs will be analyzed and discussed. This course deals with children kindergarten through school age.

CH DEV 047 School Age Programs II (3) CSU

Students will be introduced to the different types of school age childcare programs. Topics to be covered will include the child in context to the family, community and society. The physical environment and the modalities for facilitating learning will be discussed and analyzed. Opportunities to develop and implement age and content appropriate curriculum activities for school aged children will be executed in classroom projects. Students will be required to create curriculum activities in the format of lesson plans for school age children.

CH DEV 065 ADULT SUPERVISION/EARLY CHILDHOOD MENTORING (2) CSU

This course is a study of the modalities and principles of supervising teachers, staff and student-teachers in an early childhood program. Emphasis is placed on the role of the director, teacher, staff and student-teacher. The course will review leadership styles, communication skills, conflict resolution techniques, as well mentoring responsibilities and techniques. This course includes reviewing and utilizing the ECERS Rating Scale in evaluating and assessing the classroom and teacher effectiveness and appropriateness. This course will discuss the NAEYC Developmentally Appropriate Practices, the Pre-K Guidelines and N.A.E.Y.C. Code of Ethics.

CH DEV 172 Introduction to Careers in Child Development (1)

Introduces students to the variety of career options available to Child Development majors. It explores career opportunities, qualifications required, resources available, as well as academic and professional support systems.

CINEMA (CINEMA)

(Also see Film Production and Theater.)

CINEMA 001 Introduction to Motion Picture Production (3) UC/CSU

A comprehensive introduction to film video production techniques and equipment. Proper procedures are explained for the use of cameras, lenses, filters, film stocks, lights, microphones, audio recorders, and other motion editing picture equipment. Attention is also given to production planning and postproduction as well.

CINEMA 002 Beginning Motion Picture Workshop (3) CSU

This is an introductory course in practical filmmaking, including script, storyboard, direction, cinematography, sound and editing techniques. Each student will be responsible for the making of short films.

CINEMA 003 History of Motion Pictures (3) UC/CSU

History of the development of motion pictures, with examples, from their beginnings to the present day. Emphasis is placed on the American feature film.

CINEMA 004 History of the Documentary Film (3) UC/CSU

The development of films dealing with the truth. Films types seen and discussed include: historical, animated, propaganda, educational, commercial, cinema verite and direct cinema. Students will develop critical standards for judging documentary films.

CINEMA 005 Introduction to Screenwriting (3) UC/CSU

Course work consists of writing screenplays based on the Hollywood technique known as "The Hero's Journey." Students will pitch their script to a studio and/or network executive.

CINEMA 006 Introduction to Cinematography (3) UC/CSU

Prerequisite: CINEMA 001 and 003 with a grade of "C" or better.

Introduction to cinematography, including optics, camera operation, laboratory procedures, terminology and aesthetics. Students will do individual and group projects using digital video camera equipment.

CINEMA 007 Advanced Cinematography and Creative Techniques (3) CSU

Prerequisite: CINEMA 006 with a grade of "C" or better.

An advanced course in creative cinematography covering sophisticated professional equipment and techniques used in the motion picture industry. Emphasis is placed on lighting and current industry standards.

CINEMA 009 Motion Picture Sound (3) CSU

Prerequisite: CINEMA 001 with satisfactory grades or better.

Students learn the basics of motion picture production and postproduction sound. Students use digital audio recorders, microphones and booms and learn how to properly record sound. Students learn to loop and mix sound using a digital audio program.

CINEMA 010 Introduction to Film Directing (3) UC/CSU

Prerequisite: CINEMA 001 and 003 with satisfactory grades or better.

Introduction to the crafts of acting and directing for the film medium; with emphasis on the visualization of the screen play, the junction of the actor in interpreting the script, and the role of the director in handling actors in the production of a film.

CINEMA 015 Advanced Motion Picture Workshop (3) CSU

Prerequisites: CINEMA 001, 002.

Advanced Students perform practical work in film or digital video production. This lecture and laboratory workshop emphasizes the creative use of the camera, editing, sound, and production activities in relation to the fiction or documentary film format. Each student will be responsible for making a short film.

CINEMA 018 Main Currents in Motion Pictures (3) UC/CSU

In this course, students will explore the major categories of movies, including comedy, science fiction, suspense, the western, horror, and the musical. Most weeks feature in-class screenings of significant feature films.

CINEMA 020 Business Aspects of Motion Picture Production (3) CSU

A survey of the business aspects of motion pictures ranging from the production, distribution and exhibition of a film, this course will provide students with a working knowledge of the necessary management skills. This information is presented from the perspective of the film industry.

CINEMA 025 Producing Motion Picture Features (3) CSU

Digital video has transformed traditional feature film production and has broadened distribution possibilities for independent productions. Students explore new frontiers and requirements for intellectual property, financing, contracts, production, formats, marketing and alternative distribution outlets.

CINEMA 032 Editing Fundamentals (3) CSU

Prerequisite: CINEMA 001 with satisfactory grades or better.

This course will explore the pivotal role that editing plays in film and TV. The course will introduce students to the history, principles and practice of editing from early film-based editing systems to modern day non-linear editing software. Coursework will include hands on activities using industry standard editing software and techniques.

CINEMA 033 Digital Video Production Workshop I (3) CSU

Prerequisite: CINEMA 001 with satisfactory grades or better.

Intermediate film and television students produce short video projects using digital video cameras and editing systems.

CINEMA 034 Motion Pictures Soundstage Production Practicum (3) CSU

Designed for students to gain practical experience in a specific area of motion picture soundstage production in order to develop the necessary skills needed in that field of the industry. Included skills are screenwriting, directing, production management, lighting, cinematography, sound recording and editing.

CINEMA 060 Entertainment Industry Careers Below-the-Line Production Skills (3) CSU

Introductory course to the skills needed to obtain and keep a position in the motion picture or television industries. Skills taught include working with production managers, first assistant directors, production designers, and script supervisors, with a focus on basic safety issues in each department.

CINEMA 107 Understanding Motion Pictures (3) UC/CSU

Analysis of the elements that make motion pictures an art form, including visual composition, color, music, acting, editing, lighting, story and sound. This course includes regular screening of classic and contemporary motion pictures, television programs and other videos.

CINEMA 111 Cinema: Developing Content for Movies (3) CSU

This course will enable students to gain a practical knowledge of how mass media is created, produced and marketed. It will enable the student to develop their own original concept, or other source material for a film, TV or internet project into a professional written proposal and oral "pitch". The course will survey the art and business of major media production, including network, cable, studio and independent film production. It will discuss the creative steps and commercial practices of project development from the creation or acquisition of source material through script development, production, marketing, distribution and exhibition. The course will survey the power and influence of mass entertainment on society, and its place in popular culture.

CINEMA 112 Script Analysis (3) CSU

Prerequisite: ENGLISH 101 with a grade of "C" or better.

This course will enable students to analyze screenplays and other literary material that is considered for production by studios, and other producers of mass entertainment. Students will be required to read classic screenplays, and screen the films on which they are based to understand and identify the strengths and weaknesses of source material. They will learn the critical and writing skills necessary to write a professional evaluation of scripts and treatments, known as "coverage." The course will instruct the student in the skills of the "reader," or "Story Analyst," so the student recognizes how material is selected, evaluated and revised in the feature film and TV series development. Student's sample coverage may be used for their professional portfolio.

COMMUNICATION STUDIES

(COMM)

COMM 101 Public Speaking (3) UC/CSU

This beginning course provides a study of the principles of communication and audience analysis. These principles are applied to everyday social and business relationships. Students are trained in the principle and practice of effective

Course Descriptions

speech composition and delivery. (*This course was formerly SPEECH 101.*)

COMM 104 Argumentation and Debate (3) UC/CSU

This course is an introduction to critical thinking and seeks to explore the various steps in the critical thinking process. Emphasis is placed on both how and why we make decisions as we do. Topics covered include claims, logic, definitions, evidence, reasoning, fallacies and persuasion. (*This course was formerly SPEECH 104.*)

COMM 111 Voice and Articulation (3) UC/CSU

This introductory course teaches effective voice production, accurate American English pronunciation and effective sound identification using the International Phonetic Alphabet. Discovery of one's natural voice coordinated with proper breathing techniques through group and individual exercises is emphasized through sense-memory techniques. (*This course was formerly SPEECH 111.*)

COMM 121 Interpersonal Communication (3) UC/CSU

This is an advanced course in the analysis of the principles and significance of interpersonal social interactions in all areas of life. Perception, building positive relationships, personal disclosure, self-fulfilling prophecies, effective listening, communication apprehension, verbal and non-verbal communication, the impact of gender and culture on communication, expressing emotion, assertiveness, aggression, and conflict management will be examined. (*This course was formerly SPEECH 121.*)

COMM 122 Intercultural Communications (3) UC/CSU

This course examines communication in the context of intercultural interactions, explores verbal and nonverbal communication, similarities and differences in communication across cultures, and provides strategies to enhance interpersonal communication skills within the context of intercultural communication. This course is an introduction to intercultural communication in domestic and/or global contexts. The influence of cultures, languages, and social patterns on how members of groups relate with members of different ethnic and cultural groups is examined. The course also studies the theory and knowledge of effective communication within and between cultures. Focus will also include appreciation and comparison of communication among diverse groups within the larger context of American culture.

COMM 151 Small Group Communication (3) UC/CSU

This course provides an analysis of the purposes, principles and types of discussions. Emphasis is placed on developing skills to assume roles of leadership and active participation. Creative decision making, groupthink, the nature of power, conflict management, anger management and problem solving are explored. (*This course was formerly SPEECH 151.*)

COMPUTER APPLICATIONS AND OFFICE TECHNOLOGIES (CAOT)

(Formerly Office Administration)

CAOT 001 Computer Keyboarding and Document Applications I (3) CSU

Mastery of the keyboard and the operations of computers are developed. Emphasis is placed on formatting and producing letters and tables using a popular word processing program.

CAOT 001A Computer Keyboarding and Document Applications IA (1) CSU

This course instructs students in proper keyboarding techniques to accomplish mastery of the computer keyboard by touch. Students will develop speed and accuracy.

CAOT 023 Legal Office Procedures I (5) CSU

This course covers law office procedures for the legal secretary including discussion of different kinds of law practices; legal office staff and technology used in today's law firm; development of legal vocabulary and legal correspondence; the history of law and of the court structure; codes and court rules; and preparation of civil lawsuit pleadings from initial filing to trial.

CAOT 023A Legal Secretarial Procedures IA (1) CSU

This course covers law office procedures for the legal secretary including discussion of different kinds of law practices; legal office staff and technology used in today's law firm; development of legal vocabulary and legal correspondence; the history of law and of the court structure; codes and court rules; and preparation of civil lawsuit pleadings from initial filing to trial.

CAOT 023B Legal Secretarial Procedures IB (1) CSU

This course covers law office procedures for the legal secretary including discussion of different kinds of law practices; legal office staff and technology used in today's law firm; development of legal vocabulary and legal correspondence; the history of law and of the court structure; codes and court rules; and preparation of civil lawsuit pleadings from initial filing to trial.

CAOT 023C Legal Secretarial Procedures IC (1) CSU

This course covers law office procedures for the legal secretary including discussion of different kinds of law practices; legal office staff and technology used in today's law firm; development of legal vocabulary and legal correspondence; the history of law and of the court structure; codes and court rules; and preparation of civil lawsuit pleadings from initial filing to trial.

CAOT 039 Word Processing: Keyboarding and Operations (3) CSU

This course teaches word processing skills, including inputting, editing, formatting and printing documents using word processing programs.

CAOT 048 Customer Service (3) CSU

This course is designed to raise awareness, prompt thinking, give step-by-step suggestions for improvement, and provide information on how an organization can deliver service excellence. The information is beneficial whether one is new to dealing with others in a business setting or is more experienced with internal customers (e.g., coworkers or other employees) and external customers (e.g., consumers, vendors, or other end users of products). Emphasis is placed on communication, diversity, technology, time management, stress management, and customer retention.

CAOT 079 Word Processing Applications (3)

Advanced word processing skills such as mail merge, advanced formatting, tables, & graphics will be taught utilizing a popular word processing program on PC compatible computers. Students choose either MS Word or WordPerfect. CAOT 39 or CAOT 84 should be completed in preparation for this course.

CAOT 084 Microcomputer Office Applications: Word Processing (3) CSU

This course teaches word processing skills, including inputting, editing, formatting and printing documents using Microsoft Word.

CAOT 085 Microcomputer Office Applications: Spreadsheet (3) CSU

Students learn office spreadsheet applications using a PC and spreadsheet application software, such as Excel. Students are taught to create, edit, format, and print worksheets, construct graphs, and build databases that use the data table function.

CAOT 093 Legal Document Production (2) CSU

Selection and preparation of formatted documents specific to law offices.

CAOT 114 Adobe Acrobat for the Office and Web (2)

Use Adobe Acrobat to create, review, and modify PDFs (Portable Document Files) from Microsoft Office files, including Word and PowerPoint, as well as from Web pages. Emphasizes the use of PDFs on the Web for various purposes, including creating multimedia presentations, adding interactive features, creating electronic forms, and adding electronic security to documents.

COMPUTER INFORMATION SYSTEMS (CO INFO)

CO INFO 923 Introduction to Amazon Web Services (3) CSU

This course introduces the fundamentals of cloud computing including the different cloud computing models; Infrastructure as a Service, Platform as a Service and Software as a Service on the Amazon Web Services platform. This course reviews the basic concepts of server, networking, and storage virtualization. We will go over what are the current industry trends of computing, storage and application migration to cloud computing. The course will cover the advantages and disadvantages of cloud computing. Students will also study cloud careers and discusses industry demand for cloud computing skills.

CO INFO 924 Amazon Web Services-Data Storage (3) CSU

This course introduces Amazon Web Services data storage services. The course will cover both an introduction of AWS database technologies and AWS block and object-based storage services. A range of AWS SQL and NoSQL database technologies will be covered, including the principles of database design and management. In addition, AWS block and object-based storage options will be introduced which includes the principles of block and object-based storage options and the various use case scenario for AWS data storage services.

CO INFO 925 Amazon Web Services-Computing Services (3) CSU

This course introduces Amazon Web Services computing related services. Students will learn the core computing technologies offered by Amazon Web Services. The computing services students will learn will follow the computing models: Infrastructure as a Service, Platform as a Service, Function as a Service or Micro-services. You will learn how to set up and manage computing services, auto scale computing services and configure computing load balancing. You will also learn how to code auto deployment scripts for the AWS infrastructure.

CO INFO 926 Amazon Web Services-Security (3) CSU

This course explores Amazon Web Services security at both the AWS services layer and Amazon data center infrastructure layer. This course will go over how Amazon Web Services implemented security measures in their global data center infrastructure. The course will also look at the AWS security shared responsibility model and how to use Amazon security and monitoring tool to ensure security in an AWS cloud infrastructure. The course will provide an understanding of how AWS security tools can provide hardware, service, network and user activity monitoring, key management services, server and application firewall services and an introduction to implementing private and public subnets.

Course Descriptions

COMPUTER SCIENCE INFORMATION TECHNOLOGY

(CO SCI)

For all Computer Science Information Technology courses, a maximum of six courses is acceptable for transfer to UC campuses.

CO SCI 185 Directed Study (1) CSU

Computer science students will pursue on their own an in-depth study of a subject of special interest in the field of computer science, computer network & security management, web support & database administration topic(s). Consultation with the instructor on a weekly basis, plus independent work is required.

CO SCI 285 Directed Study (2) CSU

Computer science students will pursue their own, an in-depth study of a subject of special interest, in the field of Computer Science Information Technology and Computer Application topic(s). Consultation with the instructor on a weekly basis, plus independent work is required.

CO SCI 385 Directed Study - Computer Science-Information Technology (3) CSU

Computer science students will pursue their own, an in-depth study of a subject of special interest, in the field of Computer Science Information Technology and Computer Application topic(s). Consultation with the instructor on a weekly basis, plus independent work is required.

CO SCI 900 Introduction to Robotics (3) CSU

SEE ALSO MIT 220

This is an introductory course in robotics emphasizing hands-on experience to build a basic functional robot. Students learn about electric motors, servos, sensors, switches, actuators and their application in a robot. Students learn Basic Stamp computer programming and its integration into a working robotic unit. The course also includes mechanical assembly, connecting electronic components, wiring and soldering, and testing.

CO SCI 901 Introduction to Computers and Their Use (3) UC/CSU

This course examines information systems and their role in business. Focus on information systems, database management systems, networking, e-commerce, ethics and security, computer systems hardware and software components. This course covers the application of these concepts and methods through hands-on projects developing computer-based solutions to business problems.

CO SCI 902 Introduction to Computer Science (3) UC/CSU

This course is designed to take the student through the various aspects of writing algorithms to be used in computer programming. It introduces students to programming language Python, computer architecture and number systems. It covers

functions, arrays, loops, Boolean logic, branching instructions and basic data types.

CO SCI 903 Introduction to Python Programming (3) CSU

Students will learn topics of the Python language such as data types, variables, control structures, Python Objects and Oriented Design, standard and advanced mathematical libraries, tool-chain use and Python Frameworks, user-defined classes and abstract collections, single and multidimensional arrays, Python lists, tuples, collections, and dictionaries.

CO SCI 904 Internet Security Awareness (1) CSU

This course presents a basic introduction to practical computer security for all users, from students to home users to business professionals. Topics include Privacy and Property in Cyberspace, E-mail Vulnerabilities, Web-browsing Vulnerabilities and other Cyber Vulnerabilities and Landmines. This course provides Cyber Advice to reduce the risk of internet attacks and clearly explains how to work defensively to safeguard a computer system, how to keep alert, how to prepare for attacks, and what to do when attacks occur.

CO SCI 916 Introduction to Computer Hardware (3) CSU

Students will learn technology of computer hardware such as microprocessor, RAM, BIOS/CMOS, motherboard, power supply, HDD, FDD, CD, DVD, video, sound, and printer; how these form a working system; and simple troubleshooting of PC systems. Computer and networking hardware offers hands-on training in state-of-the-art computer hardware and software systems. In this class we will develop skills such as installation and troubleshooting of CPU, hard drives, CD drive, network cards, Ram memory, floppy drive, system controller & the I/O controller card, peripherals, etc. Computer safety & maintenance, BIOS & CMOS settings and network cabling techniques are also covered.

CO SCI 916A Computer A+ Hardware (1) CSU

Students learn technology of computer hardware such as microprocessor, RAM, BIOS/CMOS, motherboard, power supply, HDD, FDD, CD, DVD, video, sound, and printer; how these form a working system; and simple troubleshooting of PC systems. Computer and networking hardware offers hands-on training in state-of-the-art computer hardware and software systems. In this class we will develop skills such as installation and troubleshooting of CPU, hard drives, CD drive, network cards, Ram memory, floppy drive, system controller & the I/O controller card, peripherals, etc. Computer safety & maintenance, BIOS & CMOS settings and network cabling techniques are also covered.

CO SCI 917 Beginning Micro Assembly Language (3) UC/CSU

Prerequisite: CO SCI 902 or equivalent experience.

This course covers the organization and behavior of real computer systems at the assembly-language level. The mapping of statements and constructs in a high-level language onto sequences of machine instructions is studied, as well as the internal representation of simple data types and structures. Numerical computation is examined, noting the

various data representation errors and potential procedural errors.

CO SCI 922 Computer Forensics (3) CSU

This course is an introduction to the methods used to properly conduct a computer forensics investigation and handling of evidence from both corporate and criminal perspectives. It begins with a discussion of ethics while mapping to the objectives of the International Association of computer Investigative Specialists (IACIS) certification. Topics covered include an overview of computer forensics as a profession; collection and handling of evidence; the computer investigation process; understanding operating system boot processes and disk structures; data acquisition and analysis; technical writing; and a review of familiar computer forensics tools.

CO SCI 930 Microcomputer Application Software (4) CSU

Recommended: CO SCI 901 or equivalent experience.
This course teaches the student how to use intermediate and advanced features of the Microsoft Office suite of programs to solve typical business problems. Complex documents will be formatted and printed with WORD. Students will learn how to write Excel formulas to deal with business and accounting analysis. Students will learn how to use PowerPoint to enhance their presentation skills. Concepts of relational data base management will be taught with Access. Integration of multiple applications like SharePoint will be covered. This class will prepare students to pass the Microsoft Office Users certification tests at the proficient level.

CO SCI 933 Database Design and Programming (3) CSU

Recommended: CO SCI 930 or equivalent experience.
This course explains the concept of a relational database management system. It illustrates how the Microsoft Access database management system may be used in common business applications such as report and screen design, data-base design, and computer-aided decision making. This course covers advanced Access features including SQL programming.

CO SCI 934 Operating Systems (3) CSU

Recommended: CO SCI 901 or equivalent experience.
This course provides students with the technical foundation in current operating system technologies. It covers PC architecture, preventive maintenance and troubleshooting. It covers operating system installation, configuration, and administration and performance optimization. This course also gives students a solid grounding in the fundamentals of computer security like access control, file and folder permission, auditing and encryption. Students will learn how to harden operating systems to repel attacks. This course prepares students to perform operating system support tasks including operating system batch and Windows script file programming.

CO SCI 935 Introduction to Linux+ (3) CSU

Recommended: CO SCI 934 or equivalent experience.
This course gives students a solid foundation in the fundamentals of the Linux operating system which plays a crucial role in academic and corporate computing. In fact, Unix/Linux powers more Internet server and corporate networks than Microsoft. The topics include Linux Overview and Architecture, The Kernel and Shell, File System, Users and Groups Management, Permission and Ownership Management, Services and Processes Management. Students gain system-level experience through problem solving hands-on lab exercises at the command line and in the graphical user interface.

CO SCI 936 Introduction to Data Structures UC/CSU

Prerequisite: CO SCI 990 or equivalent experience.
This course introduces the student to the concept of 'software engineering' which is a disciplined approach to the design, production, and maintenance of computer programs. Concepts of data design, encapsulation and information hiding will be emphasized. Arrays, stacks, queues, linked lists, binary search trees, sorting algorithms, and recursive programming techniques will be covered. Techniques of the Object-Oriented Programming paradigm will be used to develop data structures using Java programming language.

CO SCI 937 E-Commerce Essentials (3) CSU

Recommended: CO SCI 957 or equivalent experience.
This course provides complete coverage of the key business and technology elements of electronic commerce. It introduces students to both the theory and practice of conducting business over the Internet and World Wide Web. Topics include Technology Infrastructure, Selling & Marketing on the Web, Business-to-Business Strategies, Virtual Communities & Web portals, Web Server Hardware and software, Electronic Commerce Software and Electronic Commerce Security.

CO SCI 938 Web Application Programming Using Visual Basic VB.net (3) CSU

Recommended: CO SCI 902 and 933.
Web application programming has become very popular. Visual Basic is a popular language and can be used to create Web applications that work on any Web browser without the complexity of installing applications. With very little effort, the programmer can design a screen that holds standard elements such as buttons, check boxes, radio buttons, text boxes, and list boxes. Each of these objects operates as expected, producing a "standard" Web user interface. With the popularity of tablets used in personal and business use, Web application can run on all types of mobile devices that use standard web browsers.

CO SCI 939 Programming in C (3) UC/CSU

Prerequisite: CO SCI 902 or equivalent experience.
This course teaches the student to write programs in the C++ language and introduces the object-oriented programming paradigm. After reviewing basic statement types, students learn to write functions utilizing pass by value and pass by

Course Descriptions

reference. Then students are introduced to structures, classes, and objects. Students then learn how to use objects effectively in writing programs. Students learn how operator overloading and inheritance facilitate the use of objects. Pointers, memory management techniques, friend, and virtual functions are described. Finally, students examine streams and files as an example of the application of complex object-oriented programming in the C++ language.

CO SCI 940 C++ Programming II (3) UC/CSU

Prerequisite: CO SCI 939

Student learns Object-Oriented and Advanced programming with C++ including Classes, Data Abstractions, Inheritance, Composition, Virtual Functions, Operators & Functions Overloading, Templates, Exception Handling, Recursion, Pointers, Dynamic Data Types, and Linked Lists.

CO SCI 942 Discrete Structure (3) UC/CSU

Prerequisite: CO SCI 939 and MATH 260.

This course is an introduction to the discrete structures used in Computer Science with an emphasis on their applications. Topics covered include: Functions, Relations and Sets; Basic Logic; Proof Techniques; Basics of Counting; Graphs and Trees; and Discrete Probability.

CO SCI 948 Advanced Spreadsheet (3) CSU

This course is designed to expose students to some of the advanced features of Microsoft Excel. Students will learn everything from basic skills such as creating professional worksheets, using charts and graphs to more advanced skills like creating and using pivot tables, creating Excel applications, using scenario manager and solver.

CO SCI 951 Apple Care Administrator (3) CSU

Recommended: CO SCI 934.

Apple Care Administrator provides a comprehensive curriculum covering Apple products and technologies. The course includes Apple developed diagnostic tools to help diagnose and prevent problems on Apple hardware running Mac OS X. The information will also cover the Mac OS X operating system, Apple architecture, and system components. The course will also include setup, configuration, customization and troubleshooting on the Apple iPad and associated hardware. The foundation provided with the course provides students with the information needed to implement, configure, manage and maintain a computer system running Mac OS X and IOS operating systems. The course will also provide the background needed to become an Apple Certified Support Professional. Each student will be assigned a Mac computer for use during class.

CO SCI 952 Introduction to Web Technology and Design (3) CSU

Recommended: CO SCI 901 or equivalent experience.

This course is designed to take the students through introductory technical phases of website development. Students will learn basic skills such as creating web pages, tables, and forms plus an introduction to more to advanced skills like working with templates, Cascading Style Sheets

(CSS), interactive content, and publishing a site on the Internet. This is the first course in a series of courses in web site design, development, and e-commerce.

CO SCI 953 Database Management using Oracle (3) CSU

Recommended: CO SCI 933 or equivalent experience.

This course provides a rich environment for illustrating multi-user and client/ server database concepts using Oracle, such as managing concurrent users and sharing database resources, and allows users to develop database applications in a production environment using the database developer utilities. This course addressed database development activities including using SQL commands to create tables and insert, update, delete, and view date values.

CO SCI 955 Programming for Mobile Application (3) CSU

Recommended: CO SCI 902.

This course provides students with a solid grounding in the fundamentals of mobile application development. Students will learn how to create applications to deploy and run on mobile devices such as iPhone or Android. The latest technology will be introduced in the class and student will learn to use the latest programming language to write software to run under iOS or Android and develop their programs.

CO SCI 957 Introduction to Web Development HTML5 & CSS (3) CSU

Recommended: CO SCI 952 or equivalent experience.

This course teaches students to build web pages using HTML5. It will give students hands-on experience in building web pages from scratch. The topics covered include designing basic layout of the page, creating pages with images, links, and forms, tables, and media elements. The advance topics such as Cascading Style sheets and publishing to the web site are also covered.

CO SCI 958 Web Page Development (4) CSU

Recommended: CO SCI 957.

This course teaches students to build web pages using current web languages. It will give students hands-on experience in building web pages from scratch. The topics covered include building web pages with tables, image maps, frames, and forms. This course covers topics such as Pop-Up windows and Validating forms. This course also covers integrating HTML with Javascript, XML and PHP, popular web programming languages.

CO SCI 959 Advanced Programming for Mobile Devices (3)

Prerequisite: CO SCI 957, and 990 or equivalent experience

This course provides students with advanced programming concepts and skills for creating mobile applications for today's most popular platforms. Students will learn to create multi-screen, multi-touch applications; send/receive SMS and emails programmatically from within applications; read and update contacts through public contact API; use media and browser content providers; use sensors and location-based services programmatically; develop services; create a home

screen widget. Students will learn about exception handling, will create manageable user preferences and will learn to incorporate security and permissions. Students will learn to sign, publish and distribute developed applications.

CO SCI 962 Web Programming Using JavaScript (4) CSU

Recommended: CO SCI 957, or equivalent experience.

This course teaches students to create dynamic Web pages using the popular Web scripting language, JavaScript. This is the course for beginning web programmers with prior knowledge of HTML. JavaScript, a popular scripting language, adds interactive functions to HTML pages and is widely supported in Web browsers and other Web tools. This course also discusses the Document Object Model (DOM) specification published by the World Wide Web Consortium (W3C). This course features hands-on projects, a step-by-step methodology, as well as additional exercises.

CO SCI 963 Advanced Web Application Programming (3) CSU

Prerequisite: CO SCI 957, or equivalent experience.

Microsoft is revolutionizing the way Internet applications are developed. Microsoft has added new functionality to Web application development making it more user friendly. This comprehensive course will cover creating dynamic web pages; client-side and server-side controls; data binding and validation; and integration with other web development technologies. This course guides the student from beginning Web applications, to object-oriented programming, to using advanced server controls.

CO SCI 965 Introduction to Computer Networks (3) CSU

Recommended: CO SCI 934 or equivalent experience.

This course is designed to provide students with a solid foundation in computer networking technology. It covers network cables, connectors & devices, network topologies & architecture, wired and wireless networking protocols & standards, OSI model, TCP/IP, wide area networks, network security & troubleshooting and client/server operating systems survey.

CO SCI 967 Advance Linux Operating System and Applications (3) CSU

Recommended: CO SCI 935 or equivalent experience.

This course intends to provide students hands-on experience working with the Linux operating system using popular open source software bundles – LAMP, Server Virtualization and Openstack cloud computing. This is an advanced hands-on Linux course, using Enterprise Linux (CentOS) as base operating system, discussing Linux concepts, directories, permissions, file systems, package management, networking, host based security, shell scripting as well as Web development with LAMP (Linux, Apache, MySQL & PHP), server virtualization, virtual machine deployment with kickstart. Students will also build working Openstack cloud, create virtual machine image, deploy virtual machines in the cloud, create and manage EBS volumes for the virtual machines in the cloud.

CO SCI 972 Introduction to Cisco Network Fundamentals (3) CSU

Recommended: CO SCI 965, or equivalent experience.

This course is equivalent to Semester I & II of the Cisco Network Academy. Part 1 of this course introduces the architecture, structure, functions, components, and models of the Internet and computer networks. The principles of IP addressing and fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for the curriculum. By the end of Part 1, students will be able to build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes. Part 2 of this course describes the architecture, components, and operations of routers and switches in a small network. Students learn how to configure a router and a switch for basic functionality. By the end of Part II, students will be able to configure and troubleshoot routers and switches and resolve common issues with RIPv1, RIPv2, single-area and multi-area OSPF, virtual LANs, and inter-VLAN routing in both IPv4 and IPv6 networks. Students completing this course prepared to take the Cisco ICND1 and/or CCENT certification exam.

CO SCI 973 Virtualization and Cloud Computing Essentials (3) CSU

Recommended: CO SCI 972 and 982.

This course introduces the foundational capabilities and features of virtualization and VMware vSphere®. It also provides a brief overview of the array of products available from VMware®. The course also demonstrates how you can extend an existing VMware vSphere™ infrastructure to deliver IT services in a private or public cloud based on VMware products. This is the first of four courses for students pursuing a WLAC virtualization and cloud computing certificate. Successful completion of this course will prepare students for the VMware Certified Associate (VCA) industry certification. West Los Angeles is an authorized VMware IT Academy.

CO SCI 974 Introduction to Cisco Routers (3)

Recommended: CO SCI 972.

This course is equivalent to Semester III & IV of the Cisco Network Academy. Part 3 of this course describes the architecture, components, and operations of routers and switches in a large and complex network. Students learn how to configure routers and switches for advanced functionality. By the end of Part 3, students will be able to configure and troubleshoot routers and switches and resolve common issues with OSPF, EIGRP, STP, and VTP in both IPv4 and IPv6 networks. Students will also develop the knowledge and skills needed to implement DHCP and DNS operations in a network. Part IV of this course discusses the WAN technologies and network services required by converged applications in a complex network. The course enables students to understand the selection criteria of network devices and WAN technologies to meet network requirements. Students learn how to configure and troubleshoot network devices and resolve common issues with data link protocols. Students also develop the knowledge and skills needed to implement IPsec and virtual private network (VPN) operations in a complex net-

Course Descriptions

work. Students completing this course are prepared to take the Cisco ICND2 and/ or CCNA 200-120 certification exams.

CO SCI 975 Information Storage and Management for Computer Networks (3) CSU

Recommended: CO SCI 972 and 973.

This course focuses on information storage and management in classic, virtualized and cloud environments. It includes data center key elements, intelligent storage systems, storage networking technologies, and various business continuity options – along with security and management of a storage infrastructure. It also covers various aspects of cloud computing. Successful completion of this course prepares students for the EMC Information Storage Associate (EMCISA) v2 certification and supports the new E10-001 Information Storage and Management Version 2 Exam. This is the second of four courses required for the West LA College Virtualization and Cloud Computing certificate.

CO SCI 976 Vsphere Install, Configure, and Management (3) CSU

Recommended: CO SCI 972, 982 and 985.

This course explores installation, configuration, and management of VMware vSphere, which consists of ESXi and vCenter Server. The course is based on ESXi and vCenter Server. Additional course topics includes; ESXi networking and storage using vCenter Server, virtual machines migration, VMware infrastructure access, vCenter Server resource monitoring and scalability, and storage technologies, such as SAN, IP-SAN (iSCSI), NAS as they relate to VMware vSphere. The course utilizes hands-on lab exercises and demonstrations to reinforce virtualization concepts and theories. Completion of this course authorizes and helps students prepare for the VMware Certified Associate (VCA-DCV) and VMware Certified Professional – Data Center Virtualization (VCP-DCV) certification exams. This is the third of four courses required for the West Los Angeles College (WLAC) Virtualization and Cloud Computing certificate. WLAC is an authorized VMware IT Academy. PLEASE NOTE: VMware Training at WLAC is only available to full or part time students, unemployed individuals, or career changers, who are paying for the training themselves. This training is not for companies or corporate entities looking to train their employees.

CO SCI 977 Implementing a Virtual Desktop infrastructure (3) CSU

Recommended: CO SCI 976

This course helps students build their skills related to installing, configuring, and managing VMware® Horizon View™ suite of products: VMware® View Manager™, VMware® View Composer™, and VMware® ThinApp®. This course utilizes hands-on lab exercises and demonstrations to reinforce virtual desktop concepts and theories. Completion of this course helps students prepare for the VMware Certified Profession Desktop (VCP-DT) certification exam. This is the fourth of four courses required for the West Los Angeles College Virtualization and Cloud Computing certificate. WLAC is an authorized VMware IT Academy.

CO SCI 980 Introduction to Computer and Information Security I (3) CSU

Prerequisite: CO SCI 965 or equivalent experience.

This course provides students with a solid grounding in the fundamentals of computer security. Students will learn a full range of security concepts and techniques and how to apply them to the most popular operating systems and application used today. Topics include network vulnerabilities, access control, cryptography & public key infrastructure, security policy & management, network & communication security. Lab simulation involves security settings on client & server operating system.

CO SCI 982 Introduction to Microsoft Server Operating System (3) CSU

Recommended: CO SCI 934 and 965, or equivalent experience.

This is the first of three courses collectively cover implementing, managing, maintaining and provisioning services and infrastructure in a Windows Server 2012 environment. Although there is some cross-over of skills and tasks across these courses, CS982, CS983, and CS984, this course primarily covers the initial implementation and configuration of core services, such as Networking, Storage, Active Directory Domain Services (ADDS), Group Policy, File and Print services, and Hyper-V. This course maps directly to and is the preferred choice for hands-on preparation for Microsoft Certified Solutions Associate (MCSA) Exam 410: Installing and Configuring Windows Server 2012, which is the first of three exams required for MCSA: Windows Server 2012 certification.

CO SCI 983 Microsoft Network Infrastructure Administration (3) CSU

Recommended: CO SCI 982 or equivalent experience.

This is the second of three courses that collectively cover implementing, managing, maintaining and provisioning services and infrastructure in a Windows Server 2012 environment. Although there is some cross-over of skills and tasks across these courses, CS982, CS983, and CS984, this course primarily covers the administration tasks necessary to maintain a Windows Server 2012 infrastructure such as configuring and troubleshooting name resolution, user and group management with Active Directory Domain Services (ADDS) and Group Policy, implementing Remote Access solutions such as DirectAccess, VPNs and Web Application Proxy, implementing Network Policies and Network Access Protection, Data Security, deployment and maintenance of server images, as well as update management and monitoring of Windows Server 2012 environments. This course maps directly to and is the preferred choice for hands-on preparation for Microsoft Certified Solutions Associate (MCSA): Exam 411: Administering Windows Server 2012, which is the second of three exams required for MCSA: Windows Server 2012 certification.

CO SCI 984 Introduction to Windows Active Directory Services (3) CSU

Recommended: CO SCI 982 and 983 or equivalent experience.

This is the third and final course collectively cover implementing, managing, maintaining and provisioning services and infrastructure in a Windows Server 2012 environment. Although there is some cross-over of skills and tasks across these courses CS982, CS983, and CS984, this course primarily covers advanced configuration of services necessary to deploy, manage and maintain a Windows Server 2012 infrastructure, such as advanced networking services, Active Directory Domain Services (AD DS), Active Directory Rights Management Services (AD RMS), Active Directory Federation Services (AD FS), Network Load Balancing, Failover Clustering, business continuity and disaster recovery services as well as access and information provisioning and protection technologies such as Dynamic Access Control (DAC), and Web Application Proxy integration with ADFS and Workplace Join. This course maps directly to and is the preferred choice for hands-on preparation for Microsoft Certified Solutions Associate (MCSA): Exam 412: Configuring Advanced Windows Server 2012 Services, which is the third of three exams required for MCSA: Windows Server 2012 certification.

CO SCI 985 Introduction to Computer and Information Security II (3) CSU

Prerequisite: CO SCI 980.

This course provides a complete guide to Windows based network security management. It focuses primarily on the skills necessary to implement and administer a network security infrastructure. Today's networks are constantly under attack by a variety of sources; protecting a network against them requires implementing and administering an up to date management infrastructure. Students will learn firewalls and other network security components to create an in depth defensive perimeter in a computer networking environment. Topics include: Access Control List, Authentication, Security Policy, Certification Services, Encryption, Firewalls, Active Directory Services and IP Security.

CO SCI 986 Palo Alto Network Cybersecurity Essentials (3) CSU

Recommended: CO SCI 965 & 980

This course covers installing, configuring and managing next generation firewalls from Palo Alto Networks as well as security, threats, networking, logging and reporting. This course begins at an introductory level and builds to an intermediate level. Aspects of configuration include security, networking threat prevention, logging, reporting of the Palo Alto Network Operating System (PANOS). Higher level concepts include Global Protect, an extension of the corporate firewalls rules to laptops outside the network, Active/Active High Availability and control over user applications and content. Security engineers, network engineers, and support staff are the targeted audience for this course.

CO SCI 988 Installing, Configuring, and Administering Microsoft SQL (3) CSU

Recommended: CO SCI 933 and 982, or equivalent experience.

This course provides students with the knowledge and skills required to install, configure, administer, and troubleshoot the client-server database management system of Microsoft Structured Query Language (SQL) Server. This course is also extremely appropriate for web site developers and database support personnel. This course is one of the required elective courses for the WLAC Microsoft Certified Systems Engineer (MCSE) training program.

CO SCI 989 Implementing and Managing Microsoft Exchange Server (3)

Recommended: CO SCI 982, 983 or equivalent experience.

This course provides students with the knowledge and skills that are needed to update and support a reliable, secure messaging infrastructure. This infrastructure is used for creating, storing, and sharing information by using Microsoft Exchange Server in a medium sized to large sized (250 to 5,000 users) messaging environment.

CO SCI 990 Object Oriented Programming in Java (4) UC/CSU

Prerequisite: CO SCI 939 or equivalent experience.

This course is designed to take the student through the various phases of Java programming, from applications and applets to database programming using JDBC. The course will cover Java Foundation Classes (JFC), detailed exposure to Util and Lang packages. The course also covers Object-Oriented Programming Analysis and Design/Development using inheritance and polymorphisms.

CO SCI 991 Computer Laboratory (1)

Recommended: CO SCI 972 or equivalent experience

This is an intermediate to advanced networking lab for any current or previous Cisco and VMware students. The primary goal is to help students prepare for their Cisco ICND/CCNA or VMware VCA/VCP-DCV certifications. Cisco students will perform routing and switching labs, as well as, review Ethernet, IPv4, IPv6, NAT, VLANs, STP, OSPF, EIGRP, and security concepts. VMware students will conduct labs and review concepts related to installation, configuration and management of ESXi servers and vCenter. Instructor will conduct weekly boot camp exam prep sessions. Lab assignments can be scheduled and conducted independently. All students will have 24/7 Internet access to real Cisco hardware and VMware ESXi based pods.

CO SCI 992 Computer A+ Hardware Laboratory (1)

The rapid expansion of the computer industry has generated a growing need for highly skilled workers to repair, network, and support these increasingly complex computer systems. Computer Repair and Networking offers hands-on training in state-of-the-art computer hardware and software systems. In this class we will develop skills such as installation and troubleshooting of CPU, hard drives, CD drive, network cards, Ram memory, floppy drive, system controller & the I/O

Course Descriptions

controller card , peripherals, etc. Computer safety & maintenance, BIOS & CMOS settings and network cabling techniques are also covered.

COUNSELING

(COUNSEL)

COUNSEL 001 Introduction to College (1) CSU

Provides students with important information about the college and its resources, introduces them to the required skills for college success, helps them set educational and career goals, and assists them in developing a student educational plan (SEP) to meet those goals.

COUNSEL 004 Career Planning (1) CSU

This class examines the career developmental concepts of awareness and implementation (decision-making) as they relate to the self and the world of work. Students will develop a personal decision-making strategy utilizing the skills obtained in the class. The class will emphasize the philosophy and importance of career development and personal interests, values, and skills as well as occupational resources. Other topics include the personality type/work environment relationship, a work environment analysis, and educational planning.

COUNSEL 005 College Survival (2) CSU

This course will provide students with strategies for a successful first-year experience. Emphasis will be placed on WLAC policies, student support services, study skills, time management, test taking strategies, note-taking skills, stress management, and making informed decisions. This course is highly recommended for new and returning students.

COUNSEL 006 Career Planning for Students with Disabilities (1) CSU

This course is designed to assist students with disabilities in the exploration and development of career goals, with an emphasis on individual interests and lifestyles, values, personality traits and abilities. Topics covered include vocational assessment, career exploration, résumé writing, interview skills, and job-seeking strategies. Workplace accessibility issues and the impact of the Americans with Disabilities Act (ADA) will be discussed.

COUNSEL 008 Career Planning and Development (2) CSU

This course is an introduction to career planning and is designed for students who are contemplating a job change or who are undecided about their career or vocational choices. The focus is on a comprehensive career and personal evaluation, developing an appropriate educational plan, and utilizing a personal career strategy.

COUNSEL 017 College Survival Skills Development (1) CSU

This course provides the student with a variety of survival skills necessary to become a successful college student.

Topics include the matriculation process, library resources and usage, study skills strategies, self-esteem, time and stress management and goal setting.

COUNSEL 020 Post-Secondary Education - The Scope of Career Planning (3) UC/CSU

This course provides students with the information to make appropriate educational, career and lifestyle choices. Topics examined include educational programs and their requirements, career resources and the career decision making process, career planning, personal assessment, steps for success, values clarification, exploring personality and interests, skills assessment, the world of work, career options, making decisions, job search, preparing a winning resume, interviewing skills, and strategies for managing a career. Students will design their own educational plan.

COUNSEL 040 College Success Seminar (3) UC/CSU

This course will examine issues related to higher education that impact student success. Topics will include an overview of academic success skills, value and purpose of higher education, diversity in higher education, learning styles and memory, WLAC college policies and resources, health and wellness issues, decision making, factors that impact lifelong learning, effective oral, interpersonal and written communication strategies, critical thinking, career exploration and educational planning.

CORRECTIONS

(CORR)

(Also see Administration of Justice.)

CORR 002 Correctional Institutions (3) CSU

This course deals with the philosophy and history of corrections, including the municipal jails, state penitentiaries, federal prisons, and private prisons. Also covered is an overview of the criminal law, constitutional law, crime theories, punishment and rehabilitation. Other topics include the organization and jurisdiction of local, state and federal law enforcement agencies, role expectations and their interrelationships, a survey of professional career opportunities and the minimum qualifications required for employment as a corrections officer.

CORR 005 Legal Aspects of Corrections (3) CSU

This course offers a thorough study of the system of justice used in the United States: civil, criminal, juvenile, and therapeutic. It is designed for courses on the law and judicial process that transcend the disciplines of political science, sociology, and criminal justice.
