Introduction

Macroeconomics is concerned with the economy as a whole and the relationships between broad economic indicators. The course will cover the aggregate economy: GDP, inflation, business cycles, unemployment, fiscal and monetary policies, economic growth, productivity, and the federal deficit.

The tools of macroeconomic analysis will be developed and applied to national economic problems facing the U.S. and other market-oriented economies. Contemporary macroeconomic problems including concern about the economy moving into a recession, economic growth rates, inflation, consumer spending and personal saving, fiscal policy, monetary policy, national debt and deficits, unemployment rates, international value of the dollar, and trade deficits will be discussed. Understanding underlying economic issues, economic policies and their probable consequences is a focal point of this course.

Student Learning Outcomes

- Demonstrate a solid understanding of modern macroeconomics, including the dominant theories of decision-making and markets.
- Think analytically using both the verbal and quantitative tools employed in economics and to apply those tools to solve both theoretical as well as practical real world problems.
- Evaluate how changes in technology, government regulation, and market circumstances will impact society.

- Define and demonstrate an understanding of basic macroeconomic terms, such as gross domestic product, unemployment, inflation, and economic growth.
- Differentiate between and explain fiscal and monetary policy.
- Use the aggregate supply and demand model to analyze the theoretical effect of fiscal and monetary policy on the economy.
- Demonstrate a basic understanding of some of the advanced issues in macroeconomic policy, such as the effects of expectations, the debate over the use of stabilization policy, and the significance of the national debt.
