### **About the Academic Performance Index (API)**

The Academic Performance Index (API) is the cornerstone of California's Public Schools Accountability Act of 1999 (PSAA). The purpose of the API is to measure the academic performance and growth of schools. It is a numeric index (or scale) that ranges from a low of 200 to a high of 1000. A school's score on the API is an indicator of a school's performance level.

**API (Base)** - The API score summarizes the results of various indicators (i.e., statewide tests used in calculating the API).

**Statewide and Similar Schools Ranks** - API decile ranks are listed on the Base API reports. Schools are ranked in ten categories of equal size, called deciles, from one (lowest) to ten (highest). There are two types of API ranks: statewide rank and similar schools rank. The statewide rank compares a school to other schools of the same type statewide. The similar schools rank compares a school to 100 other schools of the same type and similar demographic characteristics. To calculate the statewide ranks, schools' API scores are first sorted separately within school type: elementary, middle, and high schools. For each of the three categories, school's API scores are organized from lowest to highest statewide. This list of school APIs is divided into ten groups of equal size and numbered from one (lowest) to ten (highest). A school's statewide rank is the decile where that school's API occurs compared to other schools statewide.

**Graduation Rate** - The graduation rate calculation corresponds to the National Center for Educational Statistics (NCES) four-year completion rate. This rate includes information on high school graduates and high school dropouts aggregated over a four-year period.

*Note: Data for some feeder high schools were not available.*
