

**West Los Angeles College
Employment Graduate Survey
Class of 2014**

The recent graduating class was surveyed to determine employment status. Of the 20 graduates, 14 responded to the survey. Two students have not yet taken the State Law and Ethics exam for licensure; one answered the survey and one did not.

- Of the 14 that answered the survey,
 - All 14 are employed in a dental setting.
 - 1 is awaiting the exam; although the student is not yet licensed, the education still provided an opportunity for the student to work in a dental office in a different capacity until he/she is licensed as a Dental Hygienist.
- 13 students are working as Dental Hygienist, with the majority working 1-2 or 3-4 days per week
 - It is typical for dental hygienist to work in more than one office as is evident in the survey
 - 43% are working 1-2 days per week
 - 43% are working 3-4 days per week
 - 14% are working 5-6 days per week

The results of the survey show that WLAC graduates are successfully finding employment upon graduation. Though it can be difficult to reach students once they graduate from the program, we had a great response rate. With the information provided we will survey the employers to determine if the program is meeting its Program Learning Outcomes.
